Raspberry Pi Bake Off SD Card after notes

Getting more room on your SD Card:

The SD Cards we have provided you have only been setup to use half of the SD Card, to gain access to the other half of the SD card do the following:

1. Type in sudo raspi-config into the terminal
2. Select Option 1, "Expand Filesystem" and press enter.

Making sure the files are up to date:

The code and documents we have provided are publicly downloadable via Github at https://github.com/whaleygeek/pibakeoff and are already cloned to the directory "pibakeoff" on your Raspberry Pi. To update them do the following

1. Ensure your Raspberry Pi is connected to the internet
2. Open up the terminal / use the console
3. cd into the "pibakeoff" folder
4. Type in "git pull"

This will ensure the files are up to date.

Reinstalling your SD card:

If your SD card starts to not work in any way and causes issues or fails to boot up follow the instructions on http://www.raspberrypi.org/quick-start-guide to reconfigure your SD card.

You can then get the same code by running the command "git clone https://github.com/whaleygeek/pibakeoff " on your Raspberry Pi's terminal
